Nomenclature of **Existing Plan** changed to **Regular Plan** from 12/06/2015

I. INTRODUCTION**A. RISK FACTORS****Standard Risk Factors**

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Schemes invest fluctuate, the value of your investment in the Schemes may go up or down
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Schemes.
- The names of the Schemes do not in any manner indicate either the quality of the Schemes or their future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operations of the Scheme beyond the initial contribution of Rs. 2,00,000/- (Rupees Two Lacs Only) made by it towards the setting up of the Mutual Fund.
- The present schemes are not guaranteed or assured return schemes.

Schemes Specific Risk Factors**1. Risks associated with equity and equity related instruments:**

Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Schemes may be adversely affected.

Further, the Equity and Equity Related Securities are risk capital and are subordinate in the right of payment to other securities, including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Schemes' ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of a Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The Schemes may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

2. Risks associated with Fixed Income and Money Market Instruments:**Price Risk/Interest Risk**

Fixed Income and Money Market Instruments carry price risk (also known as interest rate risk). Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate instruments, the general level of price risk is low (as compared to fixed rate instruments), however, these instruments are also subject to some amount of interest rate risk as the spread over the benchmark rate may change. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Prices of bonds/money market instruments traded change frequently (up or down) which in turn leads to changes in the NAV of the scheme which holds such securities.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or paying back the principal amount on maturity. In case of Government Securities, there is minimal credit risk. Lower rated or unrated securities carry a higher credit risk as compared to higher rated securities.

Liquidity or Marketability Risk

The ability of a fund to execute sale/purchase orders is dependent on the liquidity of the underlying securities. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Re-investment Risk

This refers to the risk that intermediate cash flows received from a security is re invested at a different rate than assumed at the time of purchase.

Prepayment Risk

Certain fixed income securities give an issuer a right to call back its securities before their maturity date. This right is generally exercised when interest rate has declined. The proceeds received when such right is exercised may get invested at lower yield as the interest rate have declined. This risk of deploying proceeds at lower rate is known as prepayment risk.

3. Risks associated with investments in Government Securities:

The Government Securities Market is the largest and most liquid market in India, with the large participants being banks, non-banking finance companies, insurance companies and provident funds which are required by statutes to invest in Government securities. The government securities are being issued in a tenure starting from 3m upto 40 years at present. It is more liquid in nature because of large investor base as compared to corporate bonds. Since, it is being issued over long tenure compared to corporate bonds, it carries higher interest rate risk on long tenure securities. Since the security is sovereign in nature, the credit risk is minimal.

4. Risks associated with Investing in ADR/ GDR and Foreign Securities:

Subject to necessary approvals, a Scheme may also invest in overseas financial assets as permitted under the applicable regulations. The value of an investment in a foreign issuer may depend on general global economic factors or specific economic and political factors relating to the country or countries in which the foreign issuer operates. To the extent the assets of the Scheme are invested in overseas financial assets, there may be risks associated with fluctuations in foreign exchange rates, restriction on repatriation of capital and earnings under the exchange control regulations and transaction procedure in overseas market. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls, political circumstances, bi-lateral conflicts or prevalent tax laws.

Investment in foreign securities carries currency risk. Currency risk is a form of risk that arises from the change in price of one currency against other. The exchange risk associated with a foreign denominated instrument is a key element in foreign investment. This risk flows from differential monetary policy and growth in real productivity, which results in differential inflation rates. The risk arises because currencies may move in relation to each other.

5. Risks associated with Investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by a Fund Manager involve uncertainty and decision of a Fund Manager may not always be profitable. No assurance can be given that a Fund Manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby a Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

6. Risks associated with Securities Lending:

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the

Scheme and the approved intermediary. Such failure to comply with can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

7. Risks associated with Short Selling:

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit which may result in major losses to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

8. Risks associated with transactions in units through Stock Exchange Mechanism:

In respect of transactions in Units of the Scheme through NSE and/ or BSE or any other recognized stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/ settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognized exchange in this regard.

9. Settlement Risk:

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

10. Regulatory Risk:

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

11. Risk Associated with Unlisted Securities:

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted domestic securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

12. Risks associated with investing in Foreign Securities/ Overseas investment

The risk of investing in foreign securities carries exchange rate risks related to depreciation of foreign currency and the country risks, in addition to the risks of securities in domestic securities. The country risks would include events such as change in regulations or political circumstances like introduction of extraordinary exchange rate controls, restrictions on repatriation of capital due to exchange rate controls, bi-lateral political tensions leading to immobilization of overseas financial assets and the prevalent tax laws of the respective jurisdiction for the execution of trades or otherwise.

The foreign securities are issued and traded in foreign currencies. As a result, their values may be affected by changes in exchange rates between foreign currencies and the Indian Rupee as well as between currencies of countries other than India. Restrictions on currency trading that may be imposed by developing market countries will have an adverse effect on the value of the securities of companies that trade or operate in such countries.

13. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is

known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Additional Risk:**Risk Associated with Investment in a Sector**

The fund will invest in equity and equity related securities of companies engaged in banking and financial services and hence concentration risk is expected to be high.

The scheme is also vulnerable to movements in the prices of securities invested by the scheme, which again could have a material bearing on the overall returns from the scheme. These stocks, at times, may be relatively less liquid as compared to growth stocks.

Investing in a sectoral fund is based on the premise that the Fund will seek to invest in companies belonging to a specific sector. This will limit the capability of the Fund to invest in other sectors. Also, as with all equity investing, there is the risk that companies in that specific sector will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, both of which may adversely affect investment results. Thus investing in a sector specific fund could involve potentially greater volatility and risk.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme(s) shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme(s). However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2) (c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

In addition, the Mutual Fund may disclose such details to the bankers, as may be necessary for the purpose of effecting payments to a investor. The Fund may also disclose such details to regulatory and statutory authorities/bodies as may be required or necessary.
- In case the AMC or its Sponsor or their affiliates/associates or group companies make substantial investments, either directly or indirectly in a Scheme, present or future, redemption of units by these entities may have an adverse impact on the performance of a Scheme. This may also affect the ability of the other Unit holders to redeem their units.
- As the liquidity of a Scheme's investments may sometimes be restricted by trading volumes and settlement periods, the time taken by the Fund for Redemption of Units may be significant in the event of an inordinately large number of Redemption requests or of a restructuring of a Scheme's portfolio. In view of this, the Trustee has the right, in its sole discretion, to limit redemptions under certain circumstances - please refer to the section "Right to Limit Redemptions" in this document.

What are the Investment Strategies?

The objective of the Scheme would be to seek long term capital appreciation by investing primarily in the equity and equity related instruments of Banking, Financial and Non Banking Financial Companies that form part of the BFSI Sector. The portfolio manager will adopt an active management style to optimize returns. Income generation may only be a secondary objective. In line with the above, the Scheme will primarily focus on opportunities in the financial services sector.

The financial services sector appears set for significant growth and possibly a few landmark changes over the next five years. The following factor will play a key role:

- i) The overall growth of the Indian economy & rising trend in savings and investment
- ii) Expected boom in opportunities in financial services(refer highlights of attached report) and expanding penetration of financial services
- iii) likelihood of a benign interest rate environment once the current turmoil is past

- iv) Quality regulation that has led to a more prudent position for banks in India
- v) Emerging changes that will allow for a greater role for foreign players in India
- vi) likely consolidation
- vii) expanding universe of players in financial services across geography
- viii) an emerging larger share for private sector participants in financial services pie
- ix) imminent listings from insurance and asset management spaces
- x) attractiveness of Indian stock exchanges as a platform from a systems perspective
- xi) internet based products/services
- xii) scope available for fund focused on financial services than just banking

The key factors of the investment strategy of the scheme will be:

- Identifying attractive opportunities and take concentrated exposures
- Emphasis on stock selection
- Investing across market-cap category
- Selecting stocks with an investment horizon of three to five years

Active cash calls: The fund will have the flexibility to take cash calls, if market conditions warrant such a stance in the view of the Fund Manager.

The constituents of the fund's benchmark index the S&P BSE Bankex along with the stock weightage as on May 08, 2019 are as follows:

Scrip Name	Weightage
Axis Bank Ltd	12.90%
Bank of Baroda	1.0%
City Union Bank	1.4%
Federal Bank Ltd	1.9%
HDFC Bank Ltd	23.1%
ICICI Bank Ltd	21.6%
IndusInd Bank Ltd	7.4%
Kotak Mahindra Bank Ltd	16.4%
State Bank of India	11.1%
Yes Bank Ltd	3.0%

There has been considerable broadening and deepening of the Indian financial markets due to various financial market reforms undertaken by the regulators, the introduction of innovative financial instruments in recent years and the entry of sophisticated domestic and international players.

Strong economic growth, favorable demographics, increased geographic penetration, growth of small and medium enterprises and the increasing needs for capital among Indian corporations are expected to continue to drive India's financial services industry.

Investment Strategy for Debt:

For the debt portion, the investments will be made in debt and money market instruments of banking and financial companies. The maturity profile of such investments would depend on the market dynamics.

FEATURES

i) Borrowing by the Mutual Fund

The Schemes may borrow from anybody - corporate including TAMCO, Sponsor and Commercial Banks, up-to a maximum of 20% of the net assets of the Scheme for a maximum duration of 6 months, in order to meet the

temporary liquidity needs of the Schemes, for the purpose of re-purchase, redemption of units or payment of interest or dividend to the unitholders, as per clause 44(2) of SEBI (Mutual Fund) Regulations, 1996.

ii) **Portfolio Turnover**

“Portfolio Turnover” is the term used by any Mutual Fund for measuring the amount of trading that occurs in a Scheme’s portfolio during the given period. All the schemes being open-ended schemes, it is expected that there would be a number of subscriptions and repurchase on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. However, a high turnover would not significantly affect the brokerage and transaction costs.

The Fund will endeavor to balance the increased cost on account of higher portfolio turnover with the benefits derived thereof. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for scrips / securities held in the portfolio rather than an indication of a change in Fund view on a scrip, etc.

iii) **Investment in Derivative Instruments**

The Scheme may invest in derivatives instruments such as Interest Rate Swaps (IRS), Forward Rate Agreements (FRAs) Interest Rate Options and/or Interest Rate Futures (IRF) or such other instruments as may be permitted under the Regulations, in a recognized stock exchange, subject to the frame work specified by SEBI and within the parameters approved by the Trustee company.

The Schemes may use techniques and instruments such as trading in derivative instruments to hedge the risk of fluctuations in the value of the investment portfolio. The Schemes will use derivative instruments for the purpose of hedging and portfolio balancing. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

A derivative is an instrument whose value is derived from the value of one or more of the underlying assets which can be commodities, precious metals, bonds, currency, etc. Common examples of Derivative instruments are Interest Rate Swaps, Forward Rate Agreements, Futures, Options, etc. The Scheme may write (sell) and purchase call and put options in securities in which it invests and on securities indices based on securities in which the scheme invests. Through the purchase and sale of futures contracts and related options on those contracts, the Fund would seek to hedge against a decline in securities owned by the Fund or an increase in the prices of securities which the Fund plans to purchase. The Fund would sell futures contracts on securities indices in anticipation of a fall in stock prices, to offset a decline in the value of its equity portfolio. When this type of hedging is successful, the futures contract increase in value while the Fund’s investment portfolio declines in value and thereby keep the Fund’s net asset value from declining as much as it otherwise would. Similarly, when the Fund is not fully invested, and an increase in the price of equities is expected, the Fund would purchase futures contracts to gain rapid market exposure that may partially or entirely offset increase in the cost of the equity securities it intends to purchase (short sale).

Example 1: Hedging against an anticipated rise in equity prices

The scheme has a corpus of Rs.100 crores and has invested Rs.85 crores in equity and still has a cash of Rs.15 crores available to invest. The Fund may buy index futures of a value of Rs.15 crores. The scheme may reduce the exposure to the future contract by taking an offsetting position as investments are made in the equities the scheme wants to invest in. Here, if the market rises, the scheme gains by having invested in the index futures.

Event	Gain/(Loss) from derivative position	Gain/(Loss) from cash market position	Overall Gain/(loss) to Schemes
5% rise in equity price	$15 \times 5\% = \text{Rs.}0.75 \text{ crs}$	$85 \times 5\% = \text{Rs.}4.25 \text{ crs}$	Rs.5 crores
5% fall in equity price	$15 \times 5\% = (\text{Rs.}0.75 \text{ crs})$	$85 \times 5\% = (\text{Rs.}4.25 \text{ crs})$	(Rs.5 crores)

Example 2: Hedging against anticipated fall in equity prices:-

If the Fund has a negative view on the market and would not like to sell stocks as the market might be weak, the scheme of the Fund can go short on index futures. Later, the scheme can sell the stocks and unwind the future

positions. A short position in the future would offset the long position in the underlying stocks and this can curtail potential loss in the portfolio.

For eg. The scheme has a corpus of Rs.100 crores and is fully invested in equities. If fund manager wishes to reduce the equity exposure to Rs. 80 crores in a short time, he would sell index future contracts of Rs. 20 crores.

Event	Gain/(Loss) from derivative position	Gain/(Loss) from cash market position	Overall Gain/(loss) to Schemes
5% fall in equity price	$20 \times 5\% = \text{Rs.1 cr}$	$80 \times 5\% = (\text{Rs.4.00 crs})$	(Rs.3 crores)
5% rise in equity price	$20 \times 5\% = (\text{Rs.1cr})$	$80 \times 5\% = \text{Rs.4.00 crs}$	Rs.3 crores

Example 3: Use of IRS

Assuming the Scheme is having 10% of the portfolio in cash. The fund manager has a view that the interest rate scenario is soft and call rates are unlikely to spurt over the next three months. The fund manager would therefore prefer to receive a higher rate of return on his cash, which he is lending in the overnight call market. In other words, he would like to move to a 91 days fixed interest rate from overnight floating rate.

1. Say Notional Amount : Rs. 2 crores
2. Benchmark : NSE MIBOR
3. Tenor : 91 Days
4. Fixed Rate : 10.25%
5. At the end of 91 days;
6. The Scheme pays : compounded call rates for 91 days is 9.90%
7. TMF receives: Fixed rate at 10.25% for 91 days.

In practice, however the difference of the two amounts is settled. Here the Scheme receives $\text{Rs. } 20000000 \times 0.35\% \times 91 / 365 = 17452$. The players in IRS are scheduled commercial banks, primary dealers, corporate, mutual funds and All India Financial Institutions.

Interest Rate Swap (IRS)

All swaps are financial contracts, which involves exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through and intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, particular dates in the future, one series of cash flow, (fixed interest) for another series of cash flows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cash flows need not occur on the same date.

Forward Rate Agreements (FRA)

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payments is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchange.

Interest Rate Futures (IRF)

An Interest Rate Futures contract is "an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today." The underlying security for Interest Rate Futures is either Government Bond or T-Bill. Currently Exchange traded Interest Rate Futures are standardized contracts based on 6 year, 10 year and 13 year Government of India Security and 91-day Government of India Treasury Bill (91DTB). All futures contracts available for trading are cash settled.

In addition to the above, SEBI vide its circular SEBI/HO/IMD/DF2/CIR/P/2017/109 dated September 27, 2017 has laid down the following guidelines for exposure to Interest Rate Futures (IRF)

Exposure Limits

In addition to the existing provisions of SEBI circular No.IMD/DF/11/2010 dated August 18, 2010, the following are prescribed:

- i. To reduce interest rate risk in a debt portfolio, mutual funds may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Vale of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price/PAR})}$$

- ii. In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

- iii. Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:

- a) Exposure to IRFs is created **only for hedging** the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.

- b) Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (*excluding the hedged portions, if any*) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of Para 3 of SEBI circular dated August 18, 2010. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- i. The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
- ii. The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.
- c) At no point of time, the net modified duration of part of the portfolio being hedged should be negative.

d) The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of Para 3 of SEBI circular dated August 18, 2010.

iv. The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

v. The interest rate hedging of the portfolio should be in the interest of the investors.

4. Mutual Fund schemes may imperfectly hedge their portfolio or part of their portfolio using IRFs, subject to the following conditions:

i. Prior to commencement of imperfect hedging, existing schemes shall comply with the provisions of Regulation 18 (15A) of SEBI (Mutual Funds) Regulations, 1996 and all unit holders shall be given a time-period of at least 30 days to exercise the option to exit at prevailing NAV without charging of exit load.

The risks associated with imperfect hedging shall be disclosed and explained by suitable numerical examples in the offer documents and also needs to be communicated to the investors through public notice or any other form of correspondence.

ii. In case of new schemes, the risks associated with imperfect hedging shall be disclosed and explained by suitable numerical examples in the offer documents.

Disclosure of Derivative Positions

5. In addition to the existing provisions, the mutual funds shall also make the following disclosures:

i. Separately disclose the hedging positions through IRF (both perfectly and imperfectly) in respective debt portfolios as per the format prescribed in para-13 of SEBI circular no.IMD/DF/11/2010 dated August 18, 2010,

ii. Investment in interest rate derivatives (both IRS/IRF) shall also be disclosed in the monthly portfolio disclosure as per para-H of SEBI Circular No. CIR/IMD/DF/21/2012 dated September 13, 2012 and

iii. Disclosure of the details of interest rate derivatives (both IRS/IRF) used for hedging along with debt and money market securities transacted on its website and also forwarded to AMFI as per para-B(3) of SEBI Circular No.Cir/IMD/DF/6/2012 dated February 28, 2012.

RISK MANAGEMENT/ MITIGATION STRATEGIES

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The Fund has identified the following risks of investing in equity and debt instruments and designed risk management strategies to mitigate and manage such risks.

Risk associated with portfolio construction: AMC has incorporated adequate safeguards to manage risks in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. Fund Management team has adequate processes in place for identifying & analyzing the various risk ratios. Various checks have been put in place to adhere to the Investment Restrictions. AMC is using Miles Moneyware Fundware as Front Office System.

Market Liquidity Risk and investment in unlisted securities: Fund Manager would invest in those securities that are expected to have more market liquidity. The first access to liquidity is through cash and fixed income securities. The investment in unlisted securities will be minimal and regularly monitored by Investment Monitoring Committee.

Risk associated with Equity derivatives: Equity derivatives may be used for directional (including equalization of cash) and yield enhancement strategies. The credit risk associated with equity derivatives is decreased as only exchange traded equity derivatives are permitted. On portfolio and regulatory limits, there are internal limits and there is an established monitoring process.

Quality Risk or risk of investing in unsustainable/ weak companies: Investment universe is carefully selected to only include high quality businesses.

Concentration Risk: Investment will be made as far as possible across the market capitalization spectrum and industries/sectors keeping the Investment Objective of the Scheme in view.

Credit Rating Risk: The endeavor is to invest in fixed income securities which have high credit quality and preferably have high rating from rating agencies such as CRISIL, ICRA, CARE or India Ratings & Research. The probability of rating downgrade is low. The due diligence performed by the fund management team before assigning credit limits should mitigate company specific issues.

Interest Rate Risk: Interest rate risk is managed by meticulous determination of average maturity of the portfolio. Extensive analysis of macro economic conditions is carried out to form a view of future interest rates and to position the portfolio accordingly.

Risk associated with Stock Lending: At present, there is no significant activity in the Securities Borrowing and Lending market. The Fund has so far not participated in Securities Lending market. However, we understand the risks associated with the securities lending business and the AMC will have appropriate controls (including limits) before initiating any transactions.

Risk Associated with investment in Sector: While it may not be possible to totally avoid the risk associated with the specific sector, the Fund Manager would try to mitigate the risk by building up a diversified portfolio of at least 15-20 stocks belonging to Banking, Financial and Non Banking Financial Companies.

Procedure followed for Investment Decision & Risk Control Measures

Before making any fresh investment through primary market or secondary market, the research team prepares a detailed Research Report on each investment based on the fundamental as well as the technical analysis. The Board of Trustees in terms of SEBI's guidelines has approved the format of the Research Reports. The companies are identified for investment based on top down/ bottom up approach as well as in-depth market analysis. Thereafter, the Research Report is discussed amongst the Investment Committee members comprising of the CEO, Fund Managers - Debt & Equity, CFO & HOI. The Investment Committee approves or rejects a stock. The stocks approved form a part of the stock universe. The Fund Manager then decides on the timing, quantity & price at which to buy or sell a share within the framework of the Investment Policy. The Fund Manager also takes into account the market conditions, investment/ redemption flows and other external factors. The reasons for subsequent purchase and sale of the same instrument are also being recorded. An Investment Committee looks into the following matters -

- a) Adherence to Prudential Investment guidelines
- b) Choosing the universe of stock for Equity investments.
- c) Addition/Deletion of stocks to the universe of stocks.
- d) Adherence to Derivatives trading guidelines.
- e) Risk management and risk mitigation issues.

The Investment Committee meeting is held once a month.

The Board of TAMCO has also constituted an Investment Monitoring Committee comprising of two Independent Directors and Managing Director of the Company. Investment Monitoring Committee Meeting is held every month and reviews Investments/ disinvestments made since last meeting, Research Reports etc.

Dividend Sweep Option

Under the Dividend Sweep Option (DSO), the investors may opt to automatically sweep (invest) the net dividend amount payable under the Scheme (hereinafter referred to as “Source Scheme”) into any other open-ended ed schemes (hereinafter referred to as

“Target Scheme”) of Taurus Mutual Fund on the ex-dividend date (i.e., the immediate next business day after the Record Date) into the Target Scheme specified by the investor, at the applicable NAV of the Target Scheme and accordingly applicable number of units will be allotted in the Target Scheme.

There is no minimum amount prescribed for dividend amount sweep to the Target Scheme via DSO. Accordingly, the provision for ‘Minimum Application Amount’ specified in the respective Target Scheme’s SID will not be applicable for investment made via DSO.

1. Under the Dividend Sweep Option (DSO), the investors may opt to automatically transfer (invest) the net dividend amount (i.e., net of statutory levy / taxes, if any) payable under the Scheme (hereinafter referred to as “Source Scheme”) into any other scheme (hereinafter referred to as “Target Scheme”) of Taurus Mutual Fund on the ex-dividend date (i.e., the immediate next business day after the Record Date) into the Target Scheme specified by the investor, at the applicable NAV of the Target Scheme and accordingly applicable number of units will be allotted in the Target Scheme, subject to the terms and conditions of the respective Target Scheme.
2. The minimum amount of investment is not applicable for investment made through DSO in the Target Schemes.
3. The Units allotted in the Target scheme against investment via DSO will be subject to the applicable Exit Load of the Target scheme.
4. Unitholder(s) are advised to read the SID/KIM of Target Scheme(s) carefully before opting for DSO.
5. Unit holders who wish to enroll for the DSO facility are required to fill in and submit a prescribed DSO Enrolment Form complete in all respects at any of the Official Point of Acceptance (OPA) of TMF, separately for each Scheme/Plan/Option. The enrolment for DSO facility shall be for all units under the Dividend Option of the respective Source Scheme. Request for dividend sweep to multiple schemes are not allowed, partial Dividend Sweep and partial Dividend Payout / Reinvestment are also not permitted. If the unitholder fails to specify the option i.e. growth, bonus or dividend of the target schemes then, the default shall be growth option and the default option under dividend shall be dividend re-investment option.
6. The DSO Enrollment Form is available with the OPAs and distributors of TMF as well as on the website of TMF, namely, www.taurusmutualfund.com
7. Enrolment under the DSO facility will automatically override any previous instructions of the Unitholder for ‘Dividend Payout’ or ‘Dividend Reinvestment’ facility, as the case may be, in the Source Scheme and will also apply to additional units allotted in the Source Scheme subsequently on account of additional subscription / switch-in / SIP / STP etc.
8. The request for enrolment for DSO must be submitted at least seven (7) working days prior to the Record Date for the dividend in the Source Scheme. Hence investors should submit the DSO enrolment request sufficiently in advance. In case of this condition not being met, the DSO enrolment would be effective from the immediately succeeding Record Date of the dividend in the Source Scheme. Consequently, any dividend declared between the date of acceptance of the DSO Enrollment Form and date of registration thereof by the Registrar will be paid out or reinvested in the Source Scheme, as applicable.
9. Unit holders will have the right to opt out of DSO facility at any time by submitting a written request. At the time of discontinuation of DSO facility, the unit holders should specify their choice of option i.e. Dividend Reinvestment or Dividend Payout, in the Source Scheme, failing which, the default sub-option, i.e., Dividend Reinvestment will be applicable.
10. Request for cancellation of DSO must be submitted at least seven (7) working days prior to the Record Date for the dividend in the Source Scheme. Any dividend declared in the Source Scheme during the interim period will be swept to the Target Scheme.
11. The Account Statement for DSO transactions will be sent by post or by email (if email id. is provided) within 30 days of dividend sweep.
12. It is expressly clarified that the dividends so swept and invested in Target Scheme shall be constructive payment of dividends to the Unit holder/s and constructive

	<p>receipt of the same amount from each Unit holder for investment in units of Target Scheme. It is further clarified that the dividend amount transferred would be treated as switch-in / subscription transaction in the Target Scheme and will be liable to PAN and KYC provisions, as may be applicable.</p> <p>13. TMF is not guaranteeing or assuring any dividend under any of the schemes. All dividend distributions are subject to investment performance of the respective schemes, availability of distributable surplus and at the discretion of the Trustee.</p> <p>14. The AMC reserves the right to change/ modify the terms and conditions of the DSO without prior notice or without assigning any reason thereof. If DSO facility is withdrawn from any Source Scheme or Target Scheme, all investors who have opted for DSO will be shifted under Dividend Reinvestment Option in the Source Scheme and the unitholders will be sent suitable intimation.</p>
Redemptions and Minimum balance to be maintained and consequences of non maintenance	<p>The redemptions can be for any amount or any number of units, subject to the minimum balance in Rupees, which is required to be maintained in the account, at the time of the redemption. Investors holding Unit Certificates are advised to surrender the same along with updation of their latest information not limited to bank details, PAN & FATCA to enable the redemption request to be processed. TAMCO reserves the right to close an investor's account if the value of the unit balance in the account falls below the minimum amount of investment in all the schemes. In such an event, TAMCO reserves the right to compulsorily redeem the balance units in the account completely at the applicable redemption price with or without giving him the option to invest sufficient funds to bring the value of the unit balance in the account to the required limits, within 30 days after the date of such shortfall. Such change may be brought about after taking into account the cost structure for a transaction account and / or Market practices and / or the interest of the unitholders. Further such changes shall be carried out on a prospective basis from the date of notification of such change and would not, in any manner, be prejudicial to the interests of the investors who have joined the scheme before such notification. Illustration of Impact of expense ratio on scheme's returns

To see how expense ratios can affect the investments over time, let's compare the returns of several hypothetical investments that differ only in expense ratio. The following table depicts the returns on Rs10,000 initial investment, assuming an average annualized gain of 10%, with different expense ratios (0.50%, 1%, 1.50% & 2.00%):

		Expenses Ratio			
Year	10% Gain (Rs)	0.50%	1.00%	1.50%	2.00%
0	10000.00	10000.00	10000.00	10000.00	10000.00
1	11000.00	10950.00	10900.00	10850.00	10800.00
2	12100.00	11990.50	11881.50	11773.00	11668.00
3	13310.00	13129.00	12951.92	12775.33	12610.00
4	14641.00	14375.00	14116.00	13874.00	13632.00
5	16105.10	15739.00	15386.00	15064.00	14742.00
	Less Received	366.1	719.1	1041.1	1363.1
	Less (Percentage)	2.27	4.47	6.46	8.46

If an investor had invested Rs10,000 in the scheme with a 2.00% expense ratio, the value of the investment would be Rs 14742 after 5 years. Whereas, if the investor had invested Rs 10,000 in a scheme with 0.50% expense ratio, the investment would be worth Rs 15739 after 5 years.
