SYSTEMATIC WITHDRAWAL PLAN

Systematic Withdrawal Plan is a facility which enables the unitholders to withdraw fixed sums from their unit accounts at periodic intervals. Any unitholder can avail of this facility subject to the terms and conditions contained in the SWP application form. A unitholder can opt for the facility at any time and receive regular monthly / quarterly payments from the account. The first withdrawal date should be atleast 7 business days after the date of SWP application. The valid dates for SWP are 1st, 5th, 10th, 15th and 28th. The minimum number of SWP instalments is 6 and the minimum SWP amount is Rs1,000/.

The amount withdrawn under SWP by redemption shall be converted into units of the scheme at the applicable NAV and such units will be subtracted from the unit balance of that unitholder. In case the date falls on a holiday or falls during a Book Closure Period, the immediate next Business Day will be considered for this purpose. Taurus Mutual Fund may close an investor's account if the balance falls below Rs5000/- or an equivalent number of units, due to redemptions or use of

SWP. This minimum balance amount needed for SWP may be altered from time to time at the discretion of the AMC. Unitholders may terminate the SWP or change the amount of withdrawal, but not below the specified minimum, by giving 15 days' notice to the Fund / R&T Agent. In case of Fixed Withdrawal, if the amount of instalment is more than the amount available in that account for redemption, the entire available amount will be redeemed and the SWP will terminate automatically. In such a scenario, AMC will have no obligation to communicate to the investor before the automatic termination of SWP. It will also terminate automatically upon the receipt of notification of death or incapacity of the unitholder. SWP is not available for investments under the lock-in period and pledge.

Applicable to all Special Products – in case of 3 consecutive rejections** of instalments (for SIP/OptiSIP/SWP/STP/iSIP/Opti-iSIP), Taurus MF reserves the right to Cancel/Reject all future transactions.

Taurus Opti SIP (Under Systematic Investment Plan)

It allows investors a chance to define a minimum and maximum installment amount and based on a simple formula*, a variable monthly installment amount will get calculated.

The Taurus OptiSIP installment will be calculated based on the portfolio value on T-5 days before the installment date. Irrespective of the formula* amount, the maximum and minimum investment will be limited by the maximum & minimum installment amounts as chosen by the investor initially.

i) Taurus OptiSIP Formula* -

A = Fixed Minimum Installment amount

B = Fixed Maximum Installment amount

C = [(A * Current no. of installment) - Account value of investments via OptiSIP as on 5th day (T-5) before the monthly installment date]

ii) Taurus OptiSIP Installment amount = C, provided it is not less than A or more than B, else it will be A or B respectively. The following tabular example will further clarify the above

Scenario	A (Fixed Minimum Instalment Amount) ₹	B (Fixed Maximum Instalment Amount) ₹	C (Opti SIP Formula Value) ₹	Opti SIP Instalment Amount ₹
1	5000	7000	4800.12	A = 5000
2	5000	7000	7200.45	B = 7000
3	5000	7000	6500.67	C = 6500.67

*The Trustee reserves the right to change the terms and conditions of this facility at a larger date on a prospective basis. The Trustee reserves the right to withdraw the OptiSIP facility. All other terms and conditions of SIP facilities will remain unchanged.

Taurus Opti STP (Under Systematic Transfer Plan)

This will work on the usual principle of first choosing a Source & a Transfer scheme. It will allow investors a chance to define a minimum and maximum transfer installment amount and based on a simple formula*, a variable installment amount will get calculated as per the frequency chosen by the investor. The OptiSTP installment will be calculated based on the portfolio value as on the transfer installment date. Irrespective of the formula* amount, the maximum and minimum

investment will be limited by the maximum & minimum installment amounts as chosen by the investor initially.

ii) Taurus OptiSTP Formula* -

A = Fixed Minimum Installment amount B = Fixed Maximum Installment amount

C = [(A * Current no. of installment) - Account value of investments via *OptiSTP* as on the transfer installment date]

Taurus OptiSTP Installment amount = C, provided it is not less than A or more than B, else it will be A or B respectively. The following tabular example will further clarify the above

Scenario	A (Fixed Minimum Installment Amount)	B (Fixed Maximum Installment Amount)	C (Opti STP Formula Value)	Opti STP Installment Amount
1	5000	7000	4800.12	A = 5000
2	5000	7000	7200.45	B = 7000
3	5000	7000	6500.67	C = 6500.67

*The Trustee reserves the right to change the terms and conditions of this facility at a larger date on a prospective basis. The Trustee reserves the right to withdraw the OptiSTP facility. All other terms and conditions of STP facilities will remain unchanged.

The portfolio manager will adopt an active management style to optimize returns. Income generation may only be a secondary objective. In line with the above, the Scheme will primarily focus on opportunities in the financial services sector.

The financial services sector appears set for significant growth and possibly a few landmark changes over the next five years. The following factor will play a key role:

1. The overall growth of the Indian economy & rising trend in savings and investment
2. Expected boom in opportunities in financial services (refer highlights of attached report) and expanding penetration of financial services
3. likelihood of a benign interest rate environment once the current turmoil is past
4. Quality regulation that has led to a more prudent position for banks in India
5. Emerging changes that will allow for a greater role for foreign players in India
6. likely consolidation
7. expanding universe of players in financial services across geography
8. an emerging larger share for private sector participants in financial services pie
9. imminent listings from insurance and asset management spaces
10. attractiveness of Indian stock exchanges as a platform from a systems perspective
11. internet based products/services
12. scope available for fund focused on financial services than just banking The key factors of the investment strategy of the scheme will be:
13. Identifying attractive opportunities and take concentrated exposures
14. Emphasis on stock selection
15. Investing across market-cap category
16. Selecting stocks with an investment horizon of three to five years

Active cash calls: The fund will have the flexibility to take cash calls, if market conditions warrant such a stance in the view of the Fund Manager.

The constituents of the fund's benchmark index the BSE Bankex TRI are as follows:

Scrip Name
STATE BANK OF INDIA
HDFC BANK LTD.
KOTAK MAHINDRA BANK LTD.
FEDERAL BANK LTD.
BANK OF BARODA
ICICI BANK LTD.
INDUSIND BANK LTD.
AXIS BANK LTD.
CANARA BANK
YES BANK LTD.

There has been considerable broadening and deepening of the Indian financial markets due to various financial market reforms undertaken by the regulators, the introduction of innovative financial instruments in recent years and the entry of sophisticated domestic and international players.

Strong economic growth, favourable demographics, increased geographic penetration, growth of small and medium enterprises and the increasing needs for capital among Indian corporations are expected to continue to drive India's financial services industry.

Investment Strategy for Debt:

For the debt portion, the investments will be made in debt and money market instruments of banking and financial companies. The maturity profile of such investments would depend on the market dynamics.

FEATURES

Borrowing by the Mutual Fund

The Schemes may borrow from anybody - corporate including TAMCO, Sponsor and Commercial Banks, up-to a maximum of 20% of the net assets of the Scheme for a maximum duration of 6 months, in order to meet the temporary liquidity needs of the Schemes, for the purpose of re-purchase, redemption of units or payment of interest or dividend to the unitholders, as per clause 44(2) of SEBI (Mutual Fund) Regulations, 1996.

Portfolio Turnover

"Portfolio Turnover" is the term used by any Mutual Fund for measuring the amount of trading that occurs in a Scheme's portfolio during the given period. All the schemes being open-ended schemes, it is expected that there would be a number of subscriptions and repurchase on a daily basis. Consequently, it is difficult to

estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. However, a high turnover would not significantly affect the brokerage and transaction costs.

The Fund will endeavour to balance the increased cost on account of higher portfolio turnover with the benefits derived thereof. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for scrips / securities held in the portfolio rather than an indication of a change in Fund view on a scrip, etc.

Investment in Derivative Instruments

The Scheme may invest in derivatives instruments such as Interest Rate Swaps (IRS), Forward Rate Agreements (FRAs) Interest Rate Options and/or Interest Rate Futures (IRF) or such other instruments as may be permitted under the Regulations, in a recognized stock exchange, subject to the framework specified by SEBI and within the parameters approved by the Trustee company.

The Schemes may use techniques and instruments such as trading in derivative instruments to hedge the risk of fluctuations in the value of the investment portfolio. The Schemes will use derivative instruments for the purpose of hedging and portfolio balancing. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

A derivative is an instrument whose value is derived from the value of one or more of the underlying assets which can be commodities, precious metals, bonds, currency, etc. Common examples of Derivative instruments are Interest Rate Swaps, Forward Rate Agreements, Futures, Options, etc. The Scheme may write (sell) and purchase call and put options in securities in which it invests and on securities indices based on securities in which the scheme invests. Through the purchase and sale of futures contracts and related options on those contracts, the Fund would seek to hedge against a decline in securities owned by the Fund or an increase in the prices of securities which the Fund plans to purchase. The Fund would sell futures contracts on securities indices in anticipation of a fall in stock prices, to offset a decline in the value of its equity portfolio. When this type of hedging is successful, the futures contract increase in value while the Fund's investment portfolio declines in value and thereby keep the Fund's net asset value from declining as much as it otherwise would. Similarly, when the Fund is not fully invested, and an increase in the price of equities is expected, the Fund would purchase futures contracts to gain rapid market exposure that may partially or entirely offset increase in the cost of the equity securities it intends to purchase (short sale).

Interest Rate Swap (IRS)

All swaps are financial contracts, which involves exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through and intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, particular dates in the future, one series of cash flow, (fixed interest) for another series of cash flows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cash flows need not occur on the same date.

Forward Rate Agreements (FRA)

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payments is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchange.

Interest Rate Futures (IRF)

An Interest Rate Futures contract is "an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today." The underlying security for Interest Rate Futures is either Government Bond or T-Bill. Currently Exchange traded Interest Rate Futures are standardized contracts based on 6 year, 10 year and

13 year Government of India Security and 91-day Government of India Treasury Bill (91DTB). All futures contracts available for trading are cash settled.

SEBI Regulations Applicable to trading in Derivatives:

In accordance with SEBI Circular No Cir/IMD/DF/11/2010 dated August 18, 2010, the following exposure limits for investment in derivatives will be applicable to the schemes (pursuant to clause 12.24 & 12.25 of SEBI Master Circular dated June 27, 2024).

1. The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the Net Assets of the Schemes.
2. Schemes shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the Net Assets of the Scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following -
6. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
7. Hedging position cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point1.
8. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
9. The quantity of underlying associated with the derivative position taken for hedging purpose does not exceed the quantity of the existing position against which hedge has been taken.
10. Schemes may enter into plan vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
11. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point1.

Definition of exposure in case of Derivative Positions

Each position taken in derivative shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Future Price * Lot Size * Number of Contracts
Short Future	Future Price * Lot Size * Number of Contracts
Option bought	Option Premium paid * Lot Size * Number of Contracts

In accordance with SEBI circular DNP/Cir-29/2005 dated September 14, 2005 (including circular issued by SEBI/RBI/FEMA and other Regulatory bodies thereafter from time to time). Mutual Funds are allowed to trade in derivatives. Mutual Funds can trade in index futures, index options, stock options, stock futures contracts etc.

For detailed derivative strategies, please refer to SAI.

PART III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value per unit shall be calculated by dividing the Net Assets of the Scheme by the total number of units outstanding under the scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VII of the SEBI Regulations or such norms as may be specified by SEBI from time to time.

NAV of the units of the scheme shall be calculated as shown below:

NAV ₹ Per unit = Market or Fair value of Scheme’s investments + Current Assets-Current Liabilities and Provisions / No. of units outstanding under the scheme

Illustration on Computation of NAV:

Particulars	Amount(Rs)	Asset/Liability
Securities	5,00,000	Asset
Cash & Cash Equivalent	3,00,000	Asset
Receivables	2,00,000	Asset
Accrued Interest	50,000	Asset
Total Assets	1,050,000	
Short-term Liabilities	200,000	Liability
Long-term Liabilities	150000	Liability
Accrued Expenses	1,00,000	Expense
Total Liabilities and Expenses	4,50,000	

Particulars	Amount (Rs)
Total Assets (A)	1,050000
Total Liabilities & Expenses (B)	4,50,000
Net Asset Value = (A-B)	6,00,000
Total Units Outstanding	1,000
NAV Per Unit	600 Per Unit

In respect of Taurus Banking & Financial Services Fund, Net Asset Value will be rounded off upto two decimal points.

The NAV will be calculated on all Business Days. The AMC will prominently disclose the NAVs under a separate head

on the website of the Fund www.taurusmutualfund.com and on the website of Association of Mutual Funds in India (AMFI). Investor may write to AMC on customercare@taurusmutualfund.com for availing facility of receiving the latest NAVs through SMS.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

Ongoing price for Redemption (sale) /Switch outs (to other schemes/plans of the Mutual Fund) by Investors.

Ongoing price for redemption /Switch out (to other Schemes/Plans of the Mutual Fund) is the price which a Unit holder will receive for redemption/Switch-outs. During the continuous offer of the Scheme, the Unit holder can redeem the Unit at Applicable NAV, subject to payment of Exit Load, if any.

It will be calculated using the following formula:

Redemption Price = Applicable NAV*(1-Exit Load, if any)

Example: If the Applicable NAV is Rs. 10, Exit Load is 2% then redemption price per unit will be calculated as follows:

= Rs. 10* (1-0.02)

= Rs. 9.80

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Illustration of Impact of expense ratio on scheme's returns

To see how expense ratios can affect the investments over time, let’s compare the returns of several hypothetical investments that differ only in expense ratio. The following table depicts the returns on Rs10, 000 initial investment, assuming an average annualized gain of 10%, with different expense ratios (0.50%, 1%, 1.50% and 2% and):

Scheme Returns		Expenses Ratio			
Year	10% Gain (Rs)	0.50%	1.00%	1.50%	2.00%
0	10000.00	10000.00	10000.00	10000.00	10000.00
1	11000.00	10950.00	10900.00	10850.00	10800.00
2	12100.00	11990.50	11881.50	11773.00	11668.00
3	13310.00	13129.00	12951.92	12775.33	12610.00

4	14641.00	14375.00	14116.00	13874.00	13632.00
5	16105.10	15739.00	15386.00	15064.00	14742.00
	Less Received	366.1	719.1	1041.1	1363.1
	Less (Percentage)	2.27	4.47	6.46	8.46

If an investor had invested ₹10,000 in the scheme with a 2.00% expense ratio, the value of the investment would be ₹14742 after 5 years. Whereas, if the investor had invested ₹ 10,000 in a scheme with 0.50% expense ratio, the investment would be worth ₹15739 after 5 years.

Section II

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION

For detailed description please refer [Definitions and Interpretation.pdf \(taurusmutualfund.com\)](https://www.taurusmutualfund.com/Definitions_and_Interpretation.pdf)

B. RISK FACTORS

Scheme Specific Risk Factors

Risks associated with equity and equity related instruments:

Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Schemes may be adversely affected.

Further, the Equity and Equity Related Securities are risk capital and are subordinate in the right of payment to other securities, including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Schemes' ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of a Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The Schemes may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with Fixed Income and Money Market Instruments:

Price Risk/Interest Risk

Fixed Income and Money Market Instruments carry price risk (also known as interest rate risk). Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate instruments, the general level of price risk is low (as compared to fixed rate instruments), however, these instruments are also subject to some amount of interest rate risk as the spread over the benchmark rate may change. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Prices of bonds/money market instruments traded change frequently (up or down) which in turn leads to changes in the NAV of the scheme which holds such securities.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or paying back the principal amount on maturity. In case of Government Securities, there is minimal credit risk. Lower rated or unrated securities carry a higher credit risk as compared to higher rated securities.

Liquidity or Marketability Risk

The ability of a fund to execute sale/purchase orders is dependent on the liquidity of the underlying securities. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Re-investment Risk

This refers to the risk that intermediate cash flows received from a security is re invested at a different rate than assumed at the time of purchase.

Prepayment Risk

Certain fixed income securities give an issuer a right to call back its securities before their maturity date. This right is generally exercised when interest rate has declined. The proceeds received when such right is exercised may get invested at lower yield as the interest rate have declined. This risk of deploying proceeds at lower rate is known as prepayment risk.

Risks associated with investments in Government Securities:

The Government Securities Market is the largest and most liquid market in India, with the large participants being banks, non-banking finance companies, insurance companies and provident funds which are required by statutes to invest in Government securities. The government securities are being issued in a tenure starting from 3m upto 40 years at present. It is more liquid in nature because of large investor base as compared to corporate bonds. Since, it is being issued over long tenure compared to corporate bonds, it carries higher interest rate risk on long tenure securities. Since the security is sovereign in nature, the credit risk is minimal.

Risks associated with Investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by a Fund Manager involve uncertainty and decision of a Fund Manager may not always be profitable. No assurance can be given that a Fund Manager will be able to identify or execute such strategies. The scheme may invest in Derivative and will allow a max exposure of 20% of the portfolio in Derivatives.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mis- pricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby a Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

Risks associated with Securities Lending:

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the

Scheme and the approved intermediary. Such failure to comply with can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity. The Fund Manager will apply the following limit – Not more than 20% of the net assets of the Scheme can generally be deployed in securities lending.

Risks associated with Short Selling:

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit which may result in major losses to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

Risks associated with transactions in units through Stock Exchange Mechanism:

In respect of transactions in Units of the Scheme through NSE and/ or BSE or any other recognized stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/ settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognized exchange in this regard.

Settlement Risk:

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

Regulatory Risk:

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

Risk Associated with Unlisted Securities:

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted domestic securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with investing in Tri Party Repo through CCIL (TREPS):

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is

known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Additional Risk:**Risk Associated with Investment in a Sector**

The fund will invest in equity and equity related securities of companies engaged in banking and financial services and hence concentration risk is expected to be high.

The scheme is also vulnerable to movements in the prices of securities invested by the scheme, which again could have a material bearing on the overall returns from the scheme. These stocks, at times, may be relatively less liquid as compared to growth stocks.

Investing in a sectoral fund is based on the premise that the Fund will seek to invest in companies belonging to a specific sector. This will limit the capability of the Fund to invest in other sectors. Also, as with all equity investing, there is the risk that companies in that specific sector will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, both of which may adversely affect investment results. Thus investing in a sector specific fund could involve potentially greater volatility and risk.

C. RISK MITIGATION PROCESS

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The Fund has identified the following risks of investing in equity and debt instruments and designed risk management strategies to mitigate and manage such risks.

Risk associated with portfolio construction: AMC has incorporated adequate safeguards to manage risks in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. Fund Management team has adequate processes in place for identifying & analyzing the various risk ratios. Various checks have been put in place to adhere to the Investment Restrictions. AMC is using Miles Money ware Fund ware as Front Office System.

Market Liquidity Risk and investment in unlisted securities: Fund Manager would invest in those securities that are expected to have more market liquidity. The first access to liquidity is through cash and fixed income securities. The investment in unlisted securities will be minimal and regularly monitored by Investment Committee and Investment Monitoring Committee.

Risk associated with Equity derivatives: Equity derivatives may be used for directional (including equalization of cash) and yield enhancement strategies. The credit risk associated with equity derivatives is decreased as only exchange traded equity derivatives are permitted. On portfolio and regulatory limits, there are internal limits and there is an established monitoring process.

Quality Risk or risk of investing in unsustainable/ weak companies: Investment universe is carefully selected to only include high quality businesses.

Concentration Risk: Investment will be made as far as possible across the market capitalization spectrum and industries/sectors keeping the Investment Objective of the Scheme in view.

Credit Rating Risk: The endeavor is to invest in fixed income securities which have high credit quality and preferably have high rating from rating agencies such as CRISIL, ICRA, CARE or India Ratings & Research. The probability of rating downgrade is low. The due diligence performed by the fund management team before assigning credit limits should mitigate company specific issues.

Interest Rate Risk: Interest rate risk is managed by meticulous determination of average maturity of the portfolio. Extensive analysis of macro-economic conditions is carried out to form a view of future interest rates and to position the portfolio accordingly.

Risk associated with Stock Lending: At present, there is no significant activity in the Securities Borrowing and Lending market. The Fund has so far not participated in the Securities Lending market. However, we understand the risks associated with the securities lending business and the AMC will have appropriate controls (including limits) before initiating any transactions.

Risk Associated with investment in Sector: While it may not be possible to totally avoid the risk associated with the specific sector, the Fund Manager would try to mitigate the risk by building up a diversified portfolio of atleast 15-20 stocks belonging to Banking, Financial and Non-Banking Financial Companies.

Procedure followed for Investment Decision & Risk Control Measures

Before making any fresh investment through primary market or secondary market, the research team prepares a detailed Research Report on each investment based on the fundamental as well as the technical analysis. The Board of Trustees in terms of SEBI's guidelines has approved the format of the Research Reports. The companies are identified for investment based on top down/ bottom-up approach as well as in-depth market analysis. Thereafter, the Research Report is discussed amongst the Investment Committee members comprising of the CEO, CIO, Fund Managers - Debt & Equity, Vice President – Operations and Research Analyst. The Investment Committee approves or rejects a stock. The stocks approved form a part of the stock universe. The Fund Manager then decides on the timing, quantity & price at which to buy or sell a share within the framework of the Investment Policy. The Fund Manager also takes into account the market conditions, investment/ redemption flows and other external factors. The reasons for subsequent purchase and sale of the same instrument are also being recorded. An Investment Committee looks into the following matters -

- a) Adherence to Prudential Investment guidelines
- b) Choosing the universe of stock for Equity investments.
- c) Addition/Deletion of stocks to the universe of stocks.
- d) Adherence to Derivatives trading guidelines.

e) Risk management and risk mitigation issues.

The Investment Committee meeting is held once a month.

The Board of TAMCO has also constituted an Investment Monitoring Committee comprising of two Independent Directors, two Non-Independent Directors and the Managing Director of the Company. Investment Monitoring Committee Meeting is held every month and reviews Investments/ disinvestments made since last meeting, Research Reports etc.
