Any unitholder can avail of this facility subject to the terms and conditions contained in the SWP application form. A unitholder can opt for the facility at any time and receive regular monthly / quarterly payments from the account. The first

withdrawal date should be alteast 7 business days after the date of SWP application. The valid dates for SWP are 1st, 5th, 10th, 15th and 28th. The minimum number of SWP instalments is 6 and the minimum SWP amount is Rs1,000/.

The amount withdrawn under SWP by redemption shall be converted into units of the scheme at the applicable NAV and such units will be subtracted from the unit balance of that unitholder. In case the date falls on a holiday or falls during a Book Closure Period, the immediate next Business Day will be considered for this purpose. Taurus Mutual Fund may close an investor's account if the balance falls below Rs5000/- or an equivalent number of units, due to redemptions or use of SWP. This minimum balance amount needed for SWP may be altered from time to time at the discretion of the AMC. Unitholders may terminate the SWP or change the amount of withdrawal, but not below the specified minimum, by giving 15 days' notice to the Fund / R&T Agent. In case of Fixed Withdrawal, if the amount of instalment is more than the amount available in that account for redemption, the entire available amount will be redeemed and the SWP will terminate automatically. In such a scenario, AMC will have no obligation to communicate to the investor before the automatic termination of SWP. It will also terminate automatically upon the receipt of notification of death or incapacity of the unitholder. SWP is not available for investments under the lockin period and pledge.

Taurus Opti SIP (Under Systematic Investment Plan)

It allows investors a chance to define a minimum and maximum installment amount and based on a simple formula*, a variable monthly installment amount will get calculated.

The Taurus *Opti*SIP installment will be calculated based on the portfolio value on T-5 days before the installment date. Irrespective of the formula* amount, the maximum and minimum investment will be limited by the maximum & minimum installment amounts as chosen by the investor initially.

i) Taurus OptiSIP Formula* -

A = Fixed Minimum Installment amount

B = Fixed Maximum Installment amount

C = [(A * Current no. of installment) - Account value of investments via OptiSIP as on 5th day (T-5) before the monthly installment date]

ii) **Taurus OptiSIP Installment amount** = C, provided it is not less than A or more than B, else it will be A or B respectively. The following tabular example will further clarify the above

| Scenario | A (Fixed Minimum Instalment Amount) ₹ | B (Fixed Maximum Instalment Amount) ₹ | C (Opti SIP Formula Value) ₹ | Opti SIP Instalment Amount ₹ |
|----------|---|---|---------------------------------------|------------------------------------|
| 1 | 5000 | 7000 | 4800.12 | A = 5000 |
| 2 | 5000 | 7000 | 7200.45 | B = 7000 |
| 3 | 5000 | 7000 | 6500.67 | C = 6500.67 |

^{*}The Trustee reserves the right to change the terms and conditions of this facility at a larger date on a prospective basis. The Trustee reserves the right to withdraw the OptiSIP facility. All other terms and conditions of SIP facilities will remain

unchanged.

Taurus Opti STP (Under Systematic Transfer Plan)

This will work on the usual principle of first choosing a Source & a Transfer scheme. It will allow investors a chance to define a minimum and maximum transfer installment amount and based on a simple formula*, a variable installment amount will get calculated as per the frequency chosen by the investor. The *Opti*STP installment will be calculated based on the portfolio value as on the transfer installment date. Irrespective of the formula* amount, the maximum and minimum investment will be limited by the maximum & minimum installment amounts as chosen by the investor initially.

ii) Taurus OptiSTP Formula* -

A = Fixed Minimum Installment amount B = Fixed Maximum Installment amount C = [(A * Current no. of installment) - Account value of investments via *OptiSTP* as on the transfer installment date]

Taurus *Opti***STP Installment amount** = C, provided it is not less than A or more than B, else it will be A or B respectively. The following tabular example will further clarify the above

| Scenario | A (Fixed Minimum Installment Amount) | B (Fixed Maximum Installment Amount) | C (Opti STP Formula Value) | Opti STP Installment Amount |
|----------|--|--|-------------------------------------|-----------------------------------|
| 1 | 5000 | 7000 | 4800.12 | A = 5000 |

| 3 | 5000 | 7000 | 6500.67 | C = 6500.67 |

Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

For details on derivative strategy, please refer SAI.

Portfolio Turnover

"Portfolio Turnover" is the term used by any Mutual Fund for measuring the amount of trading that occurs in a Scheme's portfolio during the given period. All the schemes being open-ended schemes, it is expected that there would be a number of subscriptions and repurchase on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. However, a high turnover would not significantly affect the brokerage and transaction costs. The Fund will endeavour to balance the increased cost on account of higher portfolio turnover with the benefits derived thereof. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for scrips / securities held in the portfolio rather than an indication of a change in Fund view on a scrip, etc.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark : BSE 100TRI

Performance comparisons of the Schemes will be made vis-à-vis their respective Benchmark. However, the Schemes' performance may not be strictly comparable with the performance of the respective Benchmark due to the inherent differences in the constructions of the portfolios.

The Board of TAMCO has also constituted an Investment Monitoring Committee comprising of two Independent Directors, two Non-Independent Directors and Managing Director of the Company. The performances of the schemes of the Mutual Fund are reviewed by the Investment Monitoring Committee at its meeting held every month. Further, in terms of SEBI Circular No. MFD/CIR/16/400/02 dated March 26, 2002 the performance of Schemes will be benchmarked against the performance of their respective Benchmark. The same have been chosen as the benchmark as the asset allocation pattern of the benchmark is in conformity with the declared asset allocation pattern of the schemes in the Scheme Information Document.

The performance of the Schemes compared to its benchmark indices will be reviewed at every meeting of the Board of Directors of the AMC and Trustee and corrective action as proposed will be taken in case of unsatisfactory performance.

In terms of SEBI Circular No. sMFD/CIR/01/ 071/02 dated April 15, 2002, the AMC and Trustee may change the benchmark index or select an additional benchmark index after recording adequate justification for carrying out such change. However, change of benchmark index and/ or selecting additional benchmark indices would be done in complete compliance of the relevant guidelines of SEBI in this regard.

Illustration of Impact of expense ratio on scheme's returns

To see how expense ratios can affect the investments over time, let's compare the returns of several hypothetical investments that differ only in expense ratio. The following table depicts the returns on ₹10,000 initial investment, assuming an average annualized gain of 10%, with different expense ratios (0.50%, 1%, 1.50% and 2%):

| | | Expenses Ratio | | | |
|------|-------------------|-------------------|----------|----------|----------|
| Year | 10% Gain (₹) | 0.50% | 1.00% | 1.50% | 2.00% |
| 0 | 10000.00 | 10000.00 | 10000.00 | 10000.00 | 10000.00 |
| 1 | 11000.00 | 10950.00 | 10900.00 | 10850.00 | 10800.00 |
| 2 | 12100.00 | 11990.50 | 11881.50 | 11773.00 | 11668.00 |
| 3 | 13310.00 | 13129.00 | 12951.92 | 12775.33 | 12610.00 |
| 4 | 14641.00 | 14375.00 | 14116.00 | 13874.00 | 13632.00 |
| 5 | 16105.10 | 15739.00 | 15386.00 | 15064.00 | 14742.00 |
| | Less Received | 366.1 | 719.1 | 1041.1 | 1363.1 |
| | Less (Percentage) | 2.27 | 4.47 | 6.46 | 8.46 |

If an investor had invested ₹10,000 in the scheme with a 2.00% expense ratio, the value of the investment would be ₹ 14742 after 5 years. Whereas, if the investor had invested ₹ 10,000 in a scheme with 0.50% expense ratio, the investment would be worth ₹ 15739 after 5 years.

A. DEFINITIONS/INTERPRETATION

For detailed description please refer <u>Definitions</u> and <u>Interpretation.pdf</u> (taurusmutualfund.com)

B. RISK FACTORS

Schemes Specific Risk Factors

Risks associated with equity and equity related instruments:

Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Schemes may be adversely affected.

Further, the Equity and Equity Related Securities are risk capital and are subordinate in the right of payment to other securities, including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however, the Schemes' ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of a Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The Schemes may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with Fixed Income and Money Market Instruments:

Price Risk/Interest Risk

Fixed Income and Money Market Instruments carry price risk (also known as interest rate risk). Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate instruments, the general level of price risk is low (as compared to fixed rate instruments), however, these instruments are also subject to some amount of interest rate risk as the spread over the benchmark rate may change. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Prices of bonds/money market instruments traded change frequently (up or down) which in turn leads to changes in the NAV of the scheme which holds such securities.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or paying back the principal amount on maturity. In case of Government Securities, there is minimal credit risk. Lower rated or unrated securities carry a higher credit risk as compared to higher rated securities.

Liquidity or Marketability Risk

The ability of a fund to execute sale/purchase orders is dependent on the liquidity of the underlying securities. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Re-investment Risk

This refers to the risk that intermediate cash flows received from a security is re invested at a different rate than assumed at the time of purchase.

Prepayment Risk

Certain fixed income securities give an issuer a right to call back its securities before their maturity date. This right is generally exercised when interest rate has declined. The proceeds received when such right is exercised may get invested at lower yield as the interest rate have declined. This risk of deploying proceeds at lower rate is known as prepayment risk.

Risks associated with investments in Government Securities:

The Government Securities Market is the largest and most liquid market in India, with the large participants being banks, non-banking finance companies, insurance companies and provident funds which are required by statutes to invest in Government securities. The government securities are being issued in a tenure starting from 3m upto 40 years at present. It is more liquid in nature because of large investor base as compared to corporate bonds. Since, it is being issued over long tenure compared to corporate bonds, it carries higher interest rate risk on long tenure securities. Since the security is sovereign in nature, the credit risk is minimal.

Risks associated with Investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by a Fund Manager involve uncertainty and decision of a Fund Manager may not always be profitable. No assurance can be given that a Fund Manager will be able to identify or execute such strategies. The scheme may invest in Derivative and will allow a max exposure of 20% of the portfolio in Derivatives.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mis- pricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby a Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

Risks associated with Securities Lending:

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply with can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the

lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

The Fund Manager will apply the following limit – Not more than 20% of the net assets of the Scheme can generally be deployed in securities lending.

Risks associated with Short Selling:

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit which may result in major losses to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

Risks associated with transactions in units through Stock Exchange Mechanism:

In respect of transactions in Units of the Scheme through NSE and/ or BSE or any other recognized stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/ settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognized exchange in this regard.

Settlement Risk:

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

Regulatory Risk:

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

Risk Associated with Unlisted Securities:

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted domestic securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with investing in Tri Party Repo through CCIL(TREPS):

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL"s contribution is used to meet the losses. Post utilization of CCIL"s contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

C. RISK MITIGATION PROCESS

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The Fund has identified the following risks of investing in equity and debt instruments and designed risk management strategies to mitigate and manage such risks.

Risk associated with portfolio construction: AMC has incorporated adequate safeguards to manage risks in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. Fund Management team has adequate processes in place for identifying & analyzing the various risk ratios. Various checks have been put in place to adhere to the Investment Restrictions. AMC is using Miles MoneywareFundware as Front Office System.

Market Liquidity Risk and investment in unlisted securities: Fund Manager would invest in those securities that are expected to have more market liquidity. The first access to liquidity is through cash and fixed income securities. The investment in unlisted securities will be minimal and regularly monitored by Investment Committee and Investment Monitoring Committee.

Risk associated with Equity derivatives: Equity derivatives may be used for directional (including equalization of cash) and yield enhancement strategies. The credit risk associated with equity derivatives is decreased as only exchange traded equity derivatives are permitted. On portfolio and regulatory limits, there are internal limits and there is an established monitoring process.

Quality Risk or risk of investing in unsustainable/ weak companies: Investment universe is carefully selected to only include high quality businesses.

Concentration Risk: Investment will be made as far as possible across the market capitalization spectrum and industries/sectors keeping the Investment Objective of the Scheme in view.

Credit Rating Risk: The endeavor is to invest in fixed income securities which have high credit quality and preferably have high rating from rating agencies such as CRISIL, ICRA, CARE or India Ratings & Research. The probability of rating downgrade is low. The due diligence performed by the fund management team before assigning credit limits should mitigate company specific issues.

Interest Rate Risk: Interest rate risk is managed by meticulous determination of average maturity of the portfolio. Extensive analysis of macro economic conditions is carried out to form a view of future interest rates and to position the portfolio accordingly.

Risk associated with Stock Lending: At present, there is no significant activity in the Securities Borrowing and Lending market. The Fund has so far not participated in Securities Lending market. However, we understand the risks associated with the securities lending business and the AMC will have appropriate controls (including limits) before initiating any transactions.

Procedure followed for Investment Decision & Risk Control Measures

Before making any fresh investment through primary market or secondary market, the research team prepares a detailed Research Report on each investment based on the fundamental as well as the technical analysis. The Board of Trustees in terms of SEBI's guidelines has approved the format of the Research Reports. The companies are identified for investment based on top down/ bottom up approach as well as in-depth market analysis.

Thereafter, the Research Report is discussed amongst the Investment Committee members comprising of the CEO, CIO, Fund Managers - Debt & Equity, Vice President – Operations and Research Analyst. The Investment Committee approves or rejects a stock. The stocks approved form a part of the stock universe. The Fund Manager then decides on the timing, quantity & price at which to buy or sell a share within the framework of the Investment Policy. The Fund Manager also takes into account the market conditions, investment/ redemption flows and other external factors. The reasons for subsequent purchase and sale of the same instrument are also being recorded. An Investment Committee looks into the following matters-

Adherence to Prudential Investment guidelines Choosing the universe of stock for Equity investments. Addition/Deletion of stocks to the universe of stocks. Adherence to Derivatives trading guidelines.

Risk management and risk mitigation issues.

The Investment Committee meeting is held once a month.

The Board of TAMCO has also constituted an Investment Monitoring Committee comprising of two Independent Directors, two Non-Independent Directors, Whole time Director and Managing Director of the Company. Investment Monitoring Committee Meeting is held every month and reviews Investments/ disinvestments made since last meeting, Research Reports etc.
