Investors subscribing for units under Direct Plan of a Scheme should indicate 'Direct Plan' against the scheme name in the application form. Investors should also mention 'Direct' in the ARN column of the application form. The table showing various scenarios for treatment of application under 'Direct Plan' or 'Regular (Existing) Plan' is as follows:

Scenario	Broker Code mentioned by the investor	Plan mentioned by the investor	Default Plan to be captured
1	Not mentioned	Not mentioned	Direct Plan
2	Not mentioned	Direct	Direct Plan
3	Not mentioned	Regular	Direct Plan

In cases of wrong/ invalid/ incomplete ARN codes mentioned on the application form, the application 'shall be processed under Regular Plan. Taurus Asset Management Company Limited (TAMCO) shall contact and obtain the correct ARN code within 30 calendar days of the receipt of the application form from the investor/ distributor. In case, the correct code is not received within 30 calendar days, TAMCO shall reprocess the transaction under Direct Plan from the date of application without any exit load, if applicable.

Treatment of Transactions received with invalid ARNs in view of AMFI Best Practices Guidelines Circular No.111 /2023-24 dated Feb 02, 2024:

Guidelines for Processing of transactions received under Regular Plan with invalid ARN:

Transactions received in Regular Plan with Invalid ARN to be processed in Direct Plan of the same Scheme (even if reported in Regular Plan), applying the below logic

Transaction Type	Primary ARN			Sub Distributor ARN		EUI N*	Execution only mentioned	Regular Plan/ Direct Plan
	Valid	Invalid	Empanelled	Valid	Invalid	Valid	Yes	
Lumpsum/ Registration	Y		Y				Y	Regular
	Y		N	Not Applicable				Direct
	Y		Y	N. A	N. A	N. A	N	Regular*
	Y		Y	Y		Y		Regular

			Y					Direct
		Y		Y	Y		Y	Regular
		Y		Y		Y		Direct
	Trigger	Y			Not Applicable			Regular
					Not Applicable			Direct

Note:

1)*If the EUIN is invalid/missing, the transactions shall be processed in Regular plan, and the distributor/investor shall be given 30-day period from the date of the transaction for remediation of the EUIN. In such cases, the investor to be advised to either provide a different EUIN linked to the ARN who would be engaged in servicing the investor OR switch to Direct Plan. The commission shall not be paid to the ARN holder if the Switch transaction does not happen, or fresh EUIN is not provided within 30 days. The commission may be paid if the fresh EUIN is provided by client within 30 days.

2) For SIP & STP facilities, the ARN validity shall be verified / validated at the time of registration. For instances where the registration details not available in RTA records the transaction shall be treated as lumpsum purchase for validations. Distributors must reconcile the active / inactive SIPs with RTA's at regular intervals.

3) 3) SIPs registered under ARN of deceased to continue till end of SIP registration period or investor's request as per AMFI guidelines; No fresh transactions or SIPs to be booked under the ARN of deceased MFD post cancellation of ARN at AMFI.

4) Only Sub-distributor's ARN with valid "ARN-"values in the transaction will be considered for validation of Sub- distributor ARN for all types of transactions (lumpsum/SIP/STP).

5) If the ARN is invalid as on date of SIP / STP registration, such registration and future transactions thereunder will be processed under DIRECT plan.

6) Transactions other than the physical mode which are found to be not in order basis above matrix, will be rejected at the time of upload / submission for following reasons: To give opportunity for the intermediary / platform to rectify details before submitting transactions or to report transactions as DIRECT.

If these transactions are accepted and processed as DIRECT, the intermediary placing the transaction will not be receiving reverse feeds and hence will not be able to reconcile.

Since the validation cannot be carried out at the time of acceptance or transactions received in physical form, the same will be done at the time of processing the transaction, and if found to be invalid, the transaction will be processed under DIRECT.

7) Transactions received from the stock exchange platforms in Demat mode with invalid ARN shall be rejected instead of processing in Direct Plan for following reasons

a) Settlement of units will fail at clearing corporation due to mismatch of ISIN.

		<p>b) If the RTA processes the transaction in DIRECT Plan, the AMC will face issues with corporate action wherein the clearing corporation will not be able to reconcile and credit the units.</p> <p>c) The distributor/broker will not be able to download the reverse feed/mail back report for the transactions reported by the respective distributor in case if we process under Direct Plan.</p> <p>For detailed disclosure on default plans and options, kindly refer SAI</p> <p>Options offered by the scheme:</p> <ol style="list-style-type: none"> 1. C. WHAT ARE THE INVESTMENT STRATEGIES?

A major portion of the funds of the Scheme will be invested in Equity shares. The Scheme will pursue the policy of diversification of its assets in term of the industry exposure. Efforts would be made to avoid concentration in a particular industry or group of industries.

The Scheme will be Flexi-cap (dynamic across large, mid, small-cap) in nature.

The Fund may invest surplus funds in TREPS segment.

Trustees may also permit the use of any investment techniques (including derivatives, futures & options, warrants etc.) which may be permitted by SEBI/RBI from time to time. The scheme may invest in Derivative and will allow a max exposure of 20% of the portfolio in Derivatives.

Investment in Derivative Instruments

The Scheme may invest in derivatives instruments such as Futures, Options, Forward Rate Agreements (FRAs) & Interest Rate Swaps (IRS) or such other instruments as may be permitted under the Regulations, in a recognized stock exchange, subject to the frame work specified by SEBI and within the parameters approved by the Trustee company.

The scheme may invest in Derivative and will allow a max exposure of 20% of the portfolio in Derivatives. The Schemes may use techniques and instruments such as trading in derivative instruments to hedge the risk of fluctuations in the value of the investment portfolio. The Schemes will use derivative instruments for the purpose of hedging and portfolio balancing. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

A derivative is an instrument whose value is derived from the value of one or more of the underlying assets which can be commodities, precious metals, bonds, currency, etc. Common examples of Derivative instruments are Interest Rate Swaps, Forward Rate Agreements, Futures, Options, etc. The Scheme may write (sell) and purchase call and put options in securities in which it invests and on securities indices based on securities in which the scheme invests. Through the purchase and sale of futures contracts and related options on those contracts, the Fund would seek to hedge against a decline in securities owned by the Fund or an increase in the prices of securities which the Fund plans to purchase. The Fund would sell futures contracts on securities indices in anticipation of a fall in stock prices, to offset a decline in the value of its equity portfolio. When this type of hedging is successful, the futures contract increases in value while the Fund's investment portfolio declines in value and thereby keep the Fund's net asset value from declining as much as it otherwise would. Similarly, when the Fund is not fully invested, and an increase in the price of equities is expected, the Fund would purchase futures contracts to gain rapid market exposure that may partially or entirely offset increase in the cost of the equity securities it intends to purchase (short sale).

For detailed derivative strategies, please refer to SAI.

FEATURES

i) Borrowing by the Mutual Fund

The Schemes may borrow from anybody - corporate including TAMCO, Sponsor and Commercial Banks, up-to a maximum of 20% of the net assets of the Scheme for a maximum duration of 6 months, in order to meet the temporary liquidity needs of the Schemes, for the purpose of re-purchase, redemption of units or payment of interest or IDCW to the unitholders, as per clause 44(2) of SEBI (Mutual Fund) Regulations, 1996.

ii) Portfolio Turnover

“Portfolio Turnover” is the term used by any Mutual Fund for measuring the amount of trading that occurs in a Scheme’s portfolio during the given period. All the schemes being open-ended schemes, it is expected that there would be a number of subscriptions and repurchase on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. However, a high turnover would not significantly affect the brokerage and transaction costs.

The Fund will endeavour to balance the increased cost on account of higher portfolio turnover with the benefits derived thereof. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for scrips / securities held in the portfolio rather than an indication of a change in Fund view on a scrip, etc.

The Trustees may from time to time at their absolute discretion review and modify the strategy provided such modification is in accordance with SEBI (Mutual Fund) Regulations.

A. COMPUTATION OF NAV

The Net Asset Value per unit shall be calculated by dividing the Net Assets of the Scheme by the total number of units outstanding under the scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VII of the SEBI Regulations or such norms as may be specified by SEBI from time to time.

NAV of the units of the scheme shall be calculated as shown below:

NAV ₹ Per unit = Market or Fair value of Scheme's investments + Current Assets-Current Liabilities and Provisions / No. of units outstanding under the scheme

Illustration on Computation of NAV:

Particulars	Amount(Rs)	Asset/Liability
Securities	5,00,000	Asset
Cash & Cash Equivalent	3,00,000	Asset
Receivables	2,00,000	Asset
Accrued Interest	50,000	Asset
Total Assets	1,050,000	
Short-term Liabilities	200,000	Liability
Long-term Liabilities	150000	Liability
Accrued Expenses	1,00,000	Expense
Total Liabilities and Expenses	4,50,000	

Particulars	Amount (Rs)
Total Assets (A)	1,050000
Total Liabilities & Expenses (B)	4,50,000
Net Asset Value = (A-B)	6,00,000
Total Units Outstanding	1,000
NAV Per Unit	600 Per Unit

In respect of Taurus Flexi Cap Fund, Net Asset Value will be rounded off up to two decimal points.

The NAV will be calculated on all Business Days. . The AMC will prominently disclose the NAVs under a separate head on the website of the Fund www.taurusmutualfund.com. and on the website of Association of Mutual Funds in India (AMFI). Investor may write to AMC on customercare@taurusmutualfund.com for availing facility of receiving the latest NAVs through SMS.

Pursuant to Regulation 49 (3) the repurchase Price of the units of an open ended scheme will not be lower than 95% of the NAV. Any imposition or enhancement of Load in future shall be applicable on prospective investments only.

Ongoing price for Redemption (sale) /Switch outs (to other schemes/plans of the Mutual Fund) by Investors.

Ongoing price for redemption /Switch out (to other Schemes/Plans of the Mutual Fund) is the price which a Unit holder will receive for redemption/Switch-outs. During the continuous offer of the Scheme, the Unit holder can redeem the Unit at Applicable NAV, subject to payment of Exit Load, if any.

It will be calculated using the following formula:

Redemption Price = Applicable NAV*(1-Exit Load, if any)

Example: If the Applicable NAV is Rs. 10, Exit Load is 2% then redemption price per unit will be calculated as follows:

= Rs. 10* (1-0.02)

= Rs. 9.80

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Illustration of Impact of expense ratio on scheme's returns

To see how expense ratios can affect the investments over time, let's compare the returns of several hypothetical investments that differ only in expense ratio. The following table depicts the returns on Rs10, 000 initial investment, assuming an average annualized gain of 10%, with different expense ratios (0.50%, 1%, 1.50% and 2% and):

Scheme Returns		Expenses Ratio			
Year	10% Gain (Rs)	0.50%	1.00%	1.50%	2.00%
0	10000.00	10000.00	10000.00	10000.00	10000.00
1	11000.00	10950.00	10900.00	10850.00	10800.00
2	12100.00	11990.50	11881.50	11773.00	11668.00
3	13310.00	13129.00	12951.92	12775.33	12610.00
4	14641.00	14375.00	14116.00	13874.00	13632.00
5	16105.10	15739.00	15386.00	15064.00	14742.00
	Less Received	366.1	719.1	1041.1	1363.1
	Less (Percentage)	2.27	4.47	6.46	8.46

If an investor had invested ₹10,000 in the scheme with a 2.00% expense ratio, the value of the investment would be ₹14742 after 5 years. Whereas, if the investor had invested ₹ 10,000 in a scheme with 0.50% expense ratio, the investment would be worth ₹15739 after 5 years.

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION

For detailed description please refer [Definitions and Interpretation.pdf \(taurusmutualfund.com\)](#)

B. RISK FACTORS

Scheme Specific Risk Factors

Risks associated with equity and equity related instruments:

Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Schemes may be adversely affected.

Further, the Equity and Equity Related Securities are risk capital and are subordinate in the right of payment to other securities, including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Schemes' ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of a Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may

result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The Schemes may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with Fixed Income and Money Market Instruments:

Price Risk/Interest Risk

Fixed Income and Money Market Instruments carry price risk (also known as interest rate risk). Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate instruments, the general level of price risk is low (as compared to fixed rate instruments), however, these instruments are also subject to some amount of interest rate risk as the spread over the benchmark rate may change. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Prices of bonds/money market instruments traded change frequently (up or down) which in turn leads to changes in the NAV of the scheme which holds such securities.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or paying back the principal amount on maturity. In case of Government Securities, there is minimal credit risk. Lower rated or unrated securities carry a higher credit risk as compared to higher rated securities.

Liquidity or Marketability Risk

The ability of a fund to execute sale/purchase orders is dependent on the liquidity of the underlying securities. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Re-investment Risk

This refers to the risk that intermediate cash flows received from a security is re invested at a different rate than assumed at the time of Purchase.

Prepayment Risk

Certain fixed income securities give an issuer a right to call back its securities before their maturity date. This right is generally exercised when interest rate has declined. The proceeds received when such right is exercised may get invested at lower yield as the interest rate have declined. This risk of deploying proceeds at lower rate is known as prepayment risk.

Risks associated with investments in Government Securities:

The Government Securities Market is the largest and most liquid market in India, with the large participants being banks, non-banking finance companies, insurance companies and provident funds which are required by statutes

to invest in Government securities. The government securities are being issued in a tenure starting from 3m up to 40 years at present. It is more liquid in nature because of large investor base as compared to corporate bonds. Since, it is being issued over long tenure compared to corporate bonds, it carries higher interest rate risk on long tenure securities. Since the security is sovereign in nature, the credit risk is minimal.

Risks associated with Investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by a Fund Manager involve uncertainty and decision of a Fund Manager may not always be profitable. No assurance can be given that a Fund Manager will be able to identify or execute such strategies. The scheme may invest in Derivative and will allow a max exposure of 20% of the portfolio in Derivatives.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mis- pricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby a Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

Risks associated with Securities Lending:

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply with can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities, and this can lead to temporary illiquidity.

Risks associated with Short Selling:

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit which may result in major losses to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

Risks associated with transactions in units through Stock Exchange Mechanism:

In respect of transactions in Units of the Scheme through NSE and/ or BSE or any other recognized stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/ settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control.

Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognized exchange in this regard.

Settlement Risk:

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Portfolio to make purchases in intended securities due to settlement problems could cause the Portfolio to miss certain investment opportunities.

Regulatory Risk:

The value of the securities may be affected by uncertainties such as changes in government policies, changes in taxation, and other developments in the laws and regulations.

Risk Associated with Unlisted Securities:

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted domestic securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with investing in Tri Party Repo through CCIL (TREPS):

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

C. RISK MITIGATION PROCESS

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity and debt markets. The Fund has identified the following risks of investing in equity and debt instruments and designed risk management strategies to mitigate and manage such risks.

Risk associated with portfolio construction: AMC has incorporated adequate safeguards to manage risks in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. Fund Management team has adequate processes in place for identifying & analyzing the various risk ratios. Various checks have been put in place to adhere to the Investment Restrictions. AMC is using Miles Moneyware Fundware as Front Office System.

Market Liquidity Risk and investment in unlisted securities: Fund Manager would invest in those securities that are expected to have more market liquidity. The first access to liquidity is through cash and fixed income securities. The investment in unlisted securities will be minimal and regularly monitored by Investment Committee and Investment Monitoring Committee.

Risk associated with Equity derivatives: Equity derivatives may be used for directional (including equalization of cash) and yield enhancement strategies. The credit risk associated with equity derivatives is decreased as only exchange traded equity derivatives are permitted. On portfolio and regulatory limits, there are internal limits and there is an established monitoring process.

Quality Risk or risk of investing in unsustainable/ weak companies: Investment universe is carefully selected to only include high quality businesses.

Concentration Risk: Investment will be made as far as possible across the market capitalization spectrum and industries/sectors keeping the Investment Objective of the Scheme in view.

Credit Rating Risk: The endeavor is to invest in fixed income securities which have high credit quality and preferably have high rating from rating agencies such as CRISIL, ICRA, CARE or India Ratings & Research. The probability of rating downgrade is low. The due diligence performed by the fund management team before assigning credit limits should mitigate company specific issues.

Interest Rate Risk: Interest rate risk is managed by meticulous determination of average maturity of the portfolio. Extensive analysis of macro-economic conditions is carried out to form a view of future interest rates and to position the portfolio accordingly.

Risk associated with Stock Lending: At present, there is no significant activity in the Securities Borrowing and Lending market. The Fund has so far not participated in Securities Lending market. However, we understand the risks associated with the securities lending business and the AMC will have appropriate controls (including limits) before initiating any transactions.

Procedure followed for Investment Decision & Risk Control Measures

Before making any fresh investment through primary market or secondary market, the research team prepares a detailed Research Report on each investment based on the fundamental as well as the technical analysis. The Board of Trustees in terms of SEBI's guidelines has approved the format of the Research Reports. The companies are identified for investment based on top down/ bottom-up approach as well as in-depth market analysis. Thereafter, the Research Report is discussed amongst the Investment Committee members comprising of the CEO, CIO, Fund Managers - Debt & Equity, Vice President – Operations and Research Analyst. The Investment Committee approves or rejects a stock. The stocks approved form a part of the stock universe. The Fund Manager then decides on the timing, quantity & price at which to buy or sell a share within the framework of the Investment Policy. The Fund Manager also takes into account the market conditions, investment/ redemption flows and other external factors. The reasons for subsequent purchase and sale of the same instrument are also being recorded. An Investment Committee looks into the following matters-

- a) Adherence to Prudential Investment guidelines
- b) Choosing the universe of stock for Equity investments.
- c) Addition/Deletion of stocks to the universe of stocks.
- d) Adherence to Derivatives trading guidelines.
- e) Risk management and risk mitigation issues.
- f) The Investment Committee meeting is held once a month.

The Board of TAMCO has also constituted an Investment Monitoring Committee comprising of two Independent Directors, two Non-Independent Directors, Whole time Director and Managing Director of the Company. Investment Monitoring Committee Meeting is held every month and reviews Investments/ disinvestments made since last meeting, Research Reports etc.

vii. The exposure on account of the call option written under the covered call strategy shall not be considered as exposure in terms of Clause 12.25 of Master Circular dated June 27, 2024.

a.. The Scheme shall participate in repos in corporate debt securities as per the guidelines issued by SEBI and/or RBI from time to time and the guidelines framed by the Board of Directors of Trustee Company and the Asset Management Company, from time to time.

At present the following conditions and norms shall apply to repo in corporate debt securities:

- i. The gross exposure of the Scheme to repo transactions in corporate debt securities shall not be more than 10% of the net assets of the Scheme.
- ii. The cumulative gross exposure through repo transactions in corporate debt securities along with equity, debt, units issued by REITs & InvITs and derivatives shall not exceed 100% of the net assets of the Scheme.
- iii. The Scheme shall participate in repo transactions only in AA and above rated corporate debt securities.
- iv. The Scheme shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of six months.
- v. The Trustee and the asset Management Company have framed guidelines inter alia considering the following aspects:
 - a. Category of counterparty
 - b. Credit rating of counterparty
 - c. Tenor of collateral
 - d. Applicable haircuts
- vi. Counterparty selection & credit rating: The counterparty must be an acceptable counterparty for debt transactions. The Mutual Fund follows a counterparty empanelment process for fixed income transactions and the same shall be used for selection of counterparties for corporate bond repos. All repo transactions in corporate bonds will be governed by a repo agreement as specified by FIMMDA

and / or other specified authorities.

- vii. Collateral tenor & quality: The exposure limit/investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.
- viii. Applicable haircuts: Currently mutual funds are permitted to carry out repo transactions in government securities without any haircuts. The Reserve Bank of India has notified a minimum haircut based on rating of the corporate bond and other securities. In addition, the Fixed Income and Money Market Dealers Association (FIMMDA) would maintain a rating-haircut matrix on an ongoing basis. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

The haircuts seek to protect the lender of funds from the event of the counterparty failing to honor the repurchase leg of the repo. In such a circumstance, the Fund would suffer a loss if the value of the collateral depreciates by more than the haircut. The fall in the value of the collateral could be on account of higher yields and/ or deterioration of credit quality.

As the typical tenor of repos is short (typically overnight), the haircuts represent a relatively high degree of safety in relation to the interest rate risk on the collateral. The risk of collateral depreciation based on historical volatility is given in the table below:

Bond Tenor (yrs)	1	3	5	10
Price Volatility (%) (annualized)	0.6	1.2	1.7	3.4
Repo Tenor	Number of standard deviations needed to lose 10%			
1 day	258	136	94	48
7 days	98	52	36	18

In the above table, the price volatility of a 10-year bond is about 3.4% annualized. That is a 10% price move represents nearly a 3-sigma event on an annualized basis. For overnight tenors, this represents a 48-sigma event (for comparison a 6-sigma event occurs about once in a million observations).

It is apparent that the haircuts stipulated by RBI are more than sufficient to mitigate interest rate risk. Credit event risk remains (the collateral could default during the tenor of the repo). This risk is to be mitigated by ensuring that the collateral is acceptable from a credit point of view.

- 18. The mutual fund under all its schemes shall not own more than 10% of units issued by a single issuer of REIT and InvIT.
- 19. The Scheme shall not invest –
 - i. more than 10% of its NAV in the units of REIT and InvIT; and
 - ii. more than 5% of its NAV in the units of REIT and InvIT issued by a single issuer.

The exposure limit/ investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds.

The Scheme will comply with the other Regulations applicable to the investments of Mutual Funds from

time to time. All the investment restrictions will be applicable at the time of making investments.

The AMC/Trustee may alter these above stated restrictions from time to time to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for mutual funds to achieve its respective investment objective

Internal Norms for Investment Restrictions

Fund has policy of Internal Norms for Investment Restrictions also within the overall limit prescribed by SEBI which is being reviewed from time to time, depending upon the market conditions.

According to this policy, limits on exposure to sectors, industries, companies etc. will be fixed to avoid concentration of portfolio in particular sectors so as to ensure appropriate diversification/security for the Fund.

The purpose of this policy will be to make investments in the full spectrum of permitted investments in order to achieve the investment objective of the scheme. Internal risk parameters for limiting exposure to a particular scrip or sector may be prescribed from time to time to respond to the dynamic market conditions and market opportunities.

Investment by TAMCO in the Schemes

The Asset Management Company (TAMCO) can also invest in any of the schemes, subject to a maximum exposure of 100% of the net worth of TAMCO or as decided by the Board of TAMCO & TITCO from time to time and the AMC shall not be entitled to charge any fees on such investments. It will, however, be subject to 20/25 norms i.e. regarding minimum number of investors and single investor holding contained in guidelines issued by SEBI vide circulars dated December 12, 2003 and June 14, 2005.

Any scheme may invest in other schemes under the management of TAMCO/or schemes of any other Mutual Funds.

The aggregate inter-scheme investment under TAMCO in schemes under the management of any other AMC shall not exceed 5% of the Net Asset Value of the Fund. No fees shall be charged for investing in other schemes of other funds or any other Mutual Fund.
